

**HHD**

## Hand-Held Display (HHD)

The HHD is a high-performance tactical infantry display that enables superior manipulation of the user's C<sup>2</sup> applications and video outputs, within the framework of operational constraints.

Quality display of user's tactical data & images available through any C<sup>2</sup>, alongside convenient operation of the user's C<sup>2</sup> application using easy-to-manipulate buttons, enables users to enjoy improved orientation and situational awareness under the severest combat and environmental conditions.

- Supports easy interface to any of the user's computing solutions (supporting SVGA) or video source (platform/composite), via standard VGA, USB or BNC outputs.
- Ideal for tactical field commanders, special forces, forward observers, HLS and peacekeeping scenarios.

- »» High quality OLED SVGA display
- »» Shuttered eye guard
- »» Digital compass

# HHD

## Technical Characteristics

### Interchangeable or Dual Display Block

Hand-Held Display (HHD)

Head-Mounted Display (HMD)

Full color OLED

SVGA

### Environmental

Complies with MIL-STD-810
